

Dirt tray

Function and purpose

The dirt tray is fastened directly under the chain conveyor with D hooks, allowing free conveying of the products/ items.

The tray collects dirt coming from the conveyor and above.

It is all about protection

Dirt trays are designed to catch liquids and debris that could fall off the conveyor.

The dirt trays are custom designed for each individual conveyor, provided it is fitted with D-hooks.

Dirt trays limit any potential damage that could occur on the products/items from the conveyor dripping.

They are designed to collect any dirt from the conveyor and above.

HIGHLIGHTS

- Ensures a clean run
- Easy to empty
- Limits any potential damage on items
- Protects the area under the conveyor
