

# Acid rinse

## Maintaining the pipes and plate heat exchanger

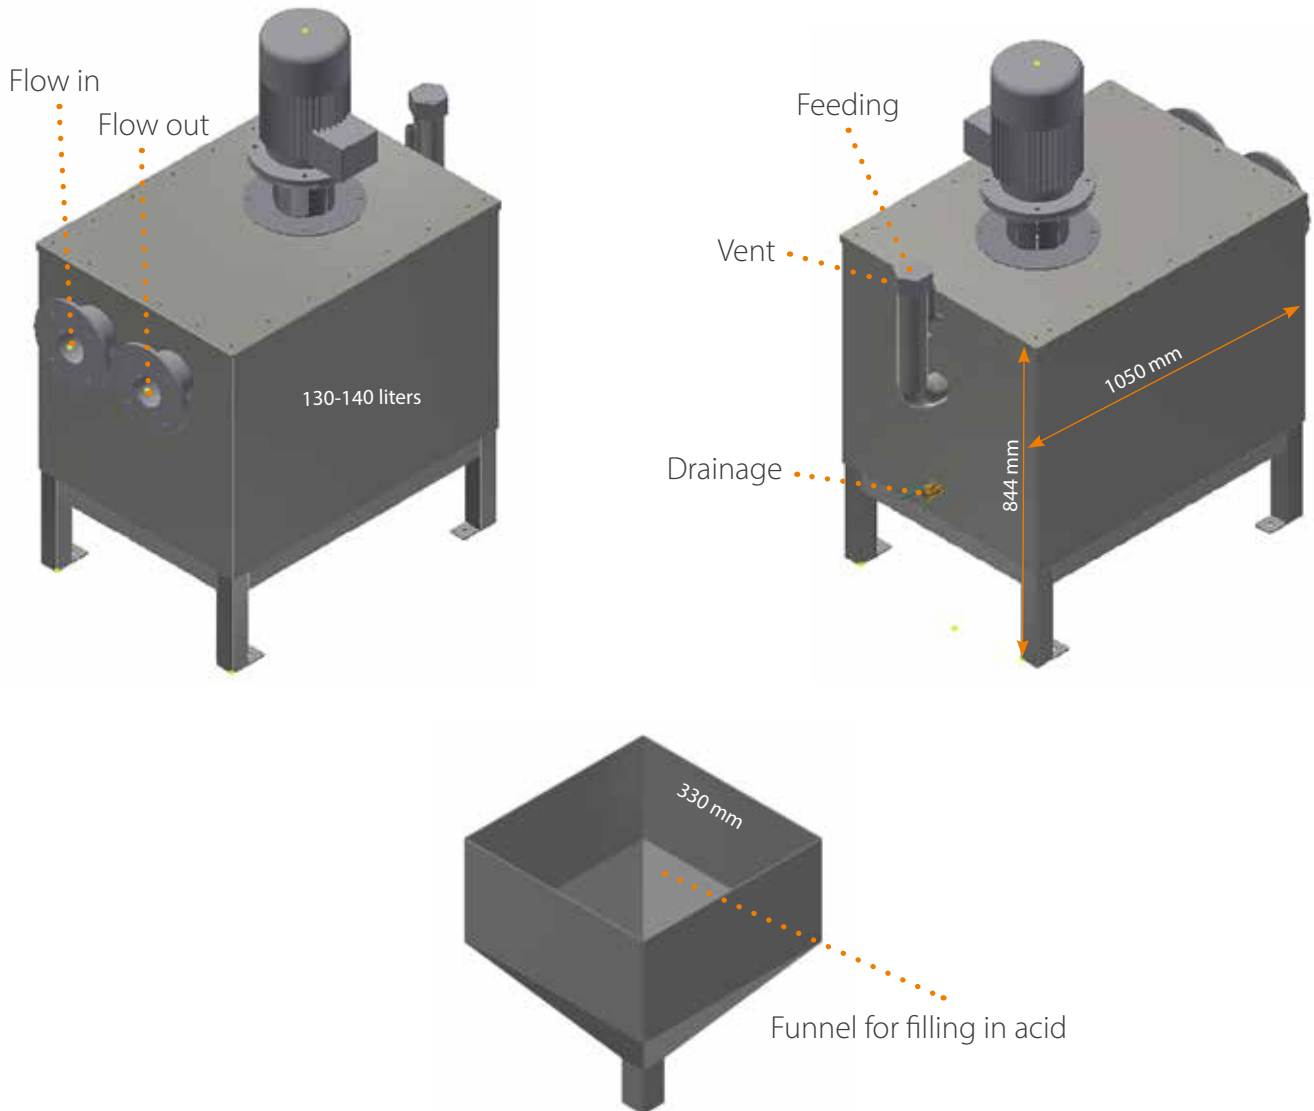

To avoid downtime during cleaning of the pipes, our acid rinse will be installed as a part of the line.

The acid rinse cleans the pipes from the pretreatment and therefore prevents unplanned downtime because of blocked pipes.

If your production is based on zink treatment and therefore is unable to shut down, it will be necessary with two acid rinses.

## CONSTRUCTION:

## HIGHLIGHTS

- Simple to operate
- Keeping the system clean and effective
- Avoiding unplanned down time
- Longer intervals between disassembling the heat exchanger
- Easy retrofitting
